MODULE HANDBOOK

| Module Name | Course Name | |
|--------------------------|--|--|
| | College English (1-4) | |
| Language Teaching | Technical English Reading | |
| | Intermediate Interpretation of Technical English | |
| | Ideological, Moral Cultivation and Basic Law | |
| | Outline of Chinese Modern and Contemporary History | |
| | An Introduction to Basic Principle of Marxism | |
| | MAO Zedong Thought and Chinese Characteristic Socialism Theory | |
| | System Introduction | |
| General Course | Social Practice | |
| | Military Knowledge | |
| | Military Training | |
| | Physical Education (1-4) | |
| | Industrial Management and Economics | |
| | Production Plan and Control | |
| Basic Mathematics | Linear Algebra | |
| Α | Calculus (1-2) | |
| Basic Mathematics | Stochastic (Prob. and Statistics) | |
| В | Compl.Funct.Integr.Tr. | |
| Dhysics | College Physics A (1-2) | |
| Physics | College Physics Experiment (1-2) | |
| | Information Technology | |
| | Information Technology Experiment | |
| | Program Design and Practice (C) | |
| Computer Science | Program Design and Practice (C)Experiment | |
| | Advanced Program Development and Application B | |
| | Advanced Program Experiment | |
| | Engineering Drawing Foundation (1-2) | |
| | Microcontroller and its Application (1-2) | |
| Microcontroller | Microcontroller I Experiment (1-2) | |
| Wherecontroller | FPGA and its Application | |
| | Microcontroller II Design | |
| | Optical Engineering (1-2) | |
| Technical Optics | Lab Applied Optics (1-2) | |
| | Optical System Simulation with Software | |
| Electronics | Analog Electronic Tech. | |
| | Digital Electronic Tech. | |
| | Lab Analog Electronic Tech. | |
| | Lab Digital Electronic Tech. | |
| Electric Circuits | Electrotechnics Foundation | |
| | Circuit Principles (1-2) | |

| Oniversity of | Shanghai for Science and Technology | | ſ |
|-------------------------|--|----|----|
| | Lab Circuit Principles (1-2) | | |
| | Optoelectronic Principles | | |
| Optoelectronics | Optoelectron. Devices | | |
| | Lab Optoelectronics | | |
| Laser Technology | Laser Technology | | |
| Laser recimology | Laser Lab. | | |
| Optical Commun. | Fiber Optics and Opt. Comm. | | |
| Optical Commun. | Lab. Opt. Comm. | | |
| | Optical Information Processing | | |
| Modern entice | Computer aided Optical Design | | |
| Modern optics | Lab. Optical design | | |
| | Academic Seminar | | |
| | Signals and Systems | | |
| Measurem. and Sensor | Nanometrology | | |
| Schibbi | Weak Signal Detection | | |
| | Course Name | СР | Н. |
| | Image Processing | 2 | 32 |
| | Photovoltaic Tech. | 2 | 32 |
| | Measurement and Control Circuits | 2 | 32 |
| Specialities | Infrared Technology | 2 | 32 |
| Optoelectr. | Thin Film Technology | 2 | 32 |
| (Elective Course) | Modern Illumination Technology | 2 | 32 |
| | Optical Information Network | 2 | 32 |
| | Integrated Circuit Manufacturing Tech | 2 | 32 |
| | The Photoelectron Emitting and Display | 2 | 32 |
| | Biological Optical Measurement | 2 | 32 |
| | Metalworking Practice | | |
| | Internship | | |
| Enterprise Practice | Seminar on Internship | | |
| | Lab. +Workshop Train. | | |
| | Student's Project | | |
| Final Thesis | Bachelor Thesis | | |

<u>क</u>

| | and skills to practice, e.g. problems in geometry and | |
|---------|--|--|
| | physics. | |
| | Learning objectives | |
| | On successful learning of this course students will | |
| | master the basic theory and method of linear algebra, | |
| | and improve the abilities to solve the practical | |
| | problems. The student should be able to demonstrate | |
| | the following learning outcomes: | |
| | 1. Familiar with matrix, determinant, system of linear | |
| | equations, vector spaces, eigenvalues and | |
| | eigenvectors, quadric forms; | |
| | Gaining practical abilities for dealing linear problems; | |
| | 3. Through learning, students are able to | |
| | -understand the definition and properties of | |
| | determinant; calculate the determinant; | |
| | - master the operations between matrices; be familiar | |
| | with some special matrix, such as diagonal matrix, | |
| | symmetrical matrix, antisymmetric matrix, invertible | |
| | matrix, orthogonal matrix, positively definite matrix; | |
| | master line and column elementary transformation; | |
| | -understand the linear dependence and linear | |
| | independence of vectors ; | |
| | -give the solutions of system of linear equations; | |
| | -computing eigenvalues and eigenvectors of square | |
| | matrixces; master the method diagonalization of matrix; | |
| | -give the normal orthogonal basis in n-dimension linear | |
| | space; | |
| | -familiar with guadric forms and their representations by | |
| | matrix; transform the quadratic forms to their | |
| | standard forms; | |
| | -understand linear transformations, especially linear | |
| | invertible transformation, orthogonal transformation. | |
| Content | Linear Algebra: | |
| | 1. Determinant | |
| | 2. Matrix | |
| | 3. System of linear equations | |
| | 4. Vector spaces | |
| | 5. Eeigenvalues and eigenvectors | |
| | 6. Quadric forms | |
| | • Calculus 1: | |
| | The content of this course will be taught in seven | |
| | chapters, mainly includes Function and limit, Derivatives | |

| and Differentials, Mean value theorem and its |
|---|
| applications, Indefinite integral, Definite integral, |
| Application of definite integral, Introduction to |
| differential equations. The following will be the detail. |
| Chapter 1. Functions and Limits |
| Understand the definition of a function; |
| Establish a simple practical model with functional |
| relationship; |
| Understand the definition of a limit and master Rules |
| for working with limits; |
| Use properties of infinitesimal to calculate the limit; |
| Understand the concept of the continuity function; |
| Grasp clearly rules and properties of continuous |
| functions on closed interval. |
| Chapter 2. Derivatives and Differentials |
| Deeply understand definition of derivative at a point |
| and derivative functions; |
| Understand geometric significance of derivatives ; |
| Skillfully grasp rules for derivatives, higher-order |
| derivatives, and derivatives of functions defined by |
| parametric functions and implicit functions; |
| Understand the concept of differential for a function. |
| Chapter 3. Mean value theorem and its applications |
| Grasp Rolle's theorem, Lagrange's mean value theorem |
| and Cauchy's mean value theorem; |
| Be familiar with applications of L'Hospital's rule; |
| Clear the monotonicity and concavity of curves and |
| Points of inflection; |
| Sketch the graph of functions; |
| Be able to find extremum, maximum and minimum, and |
| their applications. |
| Chapter 4. Indefinite integrals |
| Understand the concept of indefinite integral and its |
| properties; |
| Skillfully grasp integration by substitution and some |
| basic integral formula; |
| Skillfully master integration by parts; |
| Be able to calculate integrations of Trigonometric |
| functions and Rational functions. |
| Chapter 5. Definite integrals |
| Understand the definition of definite integral, its |
| properties and the fundamental theorem, some |
| geometric explanatory remarks; |

| University of Shanghai for Science and Technology | |
|---|---|
| Study and examination | • Linear Algebra: written examination; |
| requirements and forms of examination | • Calculus 1: The examination is divided into two |
| | parts: The mid-term examination and The |
| | final-term examination; |
| | • Calculus 2:written examination. |
| Media employed | Beamer and board/whiteboard, electronic scripts, ppt projection, computer practicing center, and working documents; |
| Reading list | Cao Weili etc. ,Linear Algebras, Hunan Science and Technology Press,2010.1 Learning guidance of Linear Algebras , University of Shanghai for Science and Technology, Hunan Science and Technology Press,2010.1 Linear Algebras, Tongji University, High Education Press, 2000.1 Higher mathematics2, Department of mathematics, Tongji University, Higher Education Press, 2007 (Sixth Edition) Guidance to higher mathematics, laboratory of higher mathematics, University of Shanghai for Science and Technology, 2005 Higher mathematics, Higher Education Press, 2007.4 (Sixth Edition) |

| Associate Prof. CAO Weili |
| Associate Prof.FAN Hongfu |
| Associate Prof. HE Changxiang |
| |
| Lecturer Wu Baofeng |
| Lecturer ZHANG Haiqiang |
| Chinese |
| Obligatory Lecture, seminar/5hours per week of the module |
| Lecture, seminar/shours per week of the module |
| Tuition time: 3 hours per week |
| Self-study: 4 hours per week |
| 5 |
| Homework ,Performance and intermediate |
| examination 30%;Final examination 70%. |
| Basic knowledge of Calculus and advanced mathematics |
| Course goals Complex Variable. This part includes fundamental knowledge which extends the concepts of the course of Calculus to complex field, such as elementary function, limit, continuation, integral, series, etc. Integral Transformation. This part is an important application of mathematics for Engineering Students. Being Good at it will lay a solid foundation for the succeeded courses such as Differential Equation, Methods of Mathematical Physic, etc, and also for other major courses such as Electro technology, Analog electronic circuit, Principle of Automatic Control, Signal Processing, etc. Learning objectives Familiarity with the basic concepts about analytic function, complex integral, residue, Fourier |
| |

| University of Shanghai for Science and Technology | | |
|---|--|--|
| | arithmetic, and other mathematics knowledge and skills. | |
| | 3. Master basic concepts about Probability Theory and | |
| | Mathematical Statistics; understand the basic theory | |
| | and method; realize the processing of the phenomenon | |
| | of random basic idea and method; develop the ability to | |
| | solve practical problems using the method of probability | |
| | and statistics analysis. | |
| Content | Stochastic(Prob. and Statistics): | |
| | Random Events and Probability | |
| | Random Variables and Distribution | |
| | Expectation and Variance | |
| | Multi-dimensional Random Variables and Distribution | |
| | Law of Large Numbers and Central Limit Theorem | |
| | Basic conceptions of Statistics | |
| | Estimation Problems | |
| | | |
| | Testing Hypothesis Compl. Funct. Integr. Tr.: | |
| | | |
| | 1. Complex Variable. This part includes complex | |
| | number and complex Variable function, analytic | |
| | function, complex integral, Taylor series, Laurent series, | |
| | residue. | |
| | 2. Integral Transformation. This part includes Fourier | |
| | transformation, Laplace transformation. | |
| Study and examination | • Stochastic(Prob. and Statistics):30% for homework | |
| requirements and forms of examination | and attendance, 70% for final written examination | |
| | Compl. Funct. Integr. Tr.: Written examination | |
| Media employed | Beamer and board/whiteboard, electronic scripts, ppt | |
| | projection, computer practicing center, and working documents; | |
| Reading list | Complex Variable, Xi'an Jiao Tong University, | |
| | Higher Education Press, 1996.5(Fourth Edition) | |
| | • Zhang Yuanlin, Integral Transformation, Higher | |
| | Education Press, 2003.12(Fourth Edition) | |
| | Ye Cinan and Liu Xiping, Probability Theory and | |
| | Mathematical Statistics, Science Press, 2010 | |
| | • The study guide to probability theory and | |
| | mathematical statistics, Office of Engineering | |
| | Mathematics, USST Sheng Zhou, Xian Shiqian and Pan Chengyi, | |
| | • probability theory and mathematical statistics, | |
| | Zhejiang University Press, 2008 | |
| | He Shuyuan, probability theory and mathematical | |
| | statistics, Higher Education Press, 2006 | |

| | ZHOU Qun |
| | TANG Meng |
| | CAI Xiongxiang |
| | GUO Li |
| | MA Shanshan |
| | Senior Lecturer. CHEN Jun |
| Language | English /Chinese |
| Relation to curriculum | Obligatory |
| Type of teaching, contact | Lecture, seminar / discussion, Doing experiments |
| hours | independently/10hours per week of the module |
| Workload | Tuition time: 7 hours per week |
| | Self-study: 9 hours per week |
| Credit points | 10 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Basic knowledge of Calculus, Vector analysis, college |
| | physics |
| Module objectives/intended | Course goals |
| learning outcomes | With an emphasis on an College Physics module, |
| | students will familiar with basic ideas of physics |
| | methods, students will gain an Professional and |
| | improved ability to analyze and solve physical |
| | |
| | problems; |
| | Enable the students to learn the basic knowledge of |
| | physical experiments, methods and skills. Training and |
| | Improving students' experiment ability and |
| | accomplishment. To deepen understanding of the |
| | principles of physics. |
| | Learning objectives |
| | On successful learning of this course module, the |
| | student should be able to demonstrate the following |
| | learning outcomes: |

| University of Shanghai for Sci | |
|--------------------------------|--|
| | 1. Establish dialectical materialist world view and |
| | scientific attitude to seek truth. |
| | 2. Acquire the ability of abstract thinking. |
| | 3. Improve self-study ability. |
| | 4. Acquire the ability to analyze and solve problems. |
| | 5. Capable of computing and judging. Use the |
| | mathematical tools to solve general problems in |
| | physics, calculation and estimation are included. |
| | 6. Be able to read the textbook, reference materials, |
| | equipment specifications for experimental |
| | preparation. |
| | 7. Apply theory to undertake preliminary analysis to |
| | judge the experimental phenomena. |
| | 8. Record and deal with the data of experiments |
| | correctly; Be able to write a qualified experiment |
| | report. |
| | 9. Students are required to grasp the concept of |
| | significant digits error and correct processing of the |
| | experimental data. |
| Content | • College Physics A(1) : |
| | Part One Mechanics |
| | Ch1 Kinematics |
| | Ch2 Newton's Laws of Motion |
| | Ch3 Momentum and Angular Momentum |
| | Ch4 Work and Energy |
| | Ch5 Rotation of a rigid body |
| | Ch6 Fundamentals of Special Relativity |
| | Part Two Thermodynamics |
| | Ch7 The Kinetic Theory of Gases |
| | Ch8 Fundamentals of Thermodynamics |
| | Part Three Electromagnetic theory |
| | Ch9 Electrostatic Field in Vacuum |
| | Ch10 Conductors and Dielectrics in Electrostatic Field |
| | • College Physics A(2): |
| | Part Three Electromagnetic theory |
| | Ch11 Magnetic Field of a Steady Current in Vacuum |
| | a)Steady Current |
| | b)Magnetic Field in Vacuum |
| | c)Magnetic Field in the Medium |
| | Ch12 Electromagnetic Induction and Electromagnetic |
| | Field |
| | Part Four Oscillation and Waves |
| | Ch13 Oscillation |

| | Ch14 Waves | |
|---------------------------|---|--|
| | Part Five Optics | |
| | Ch15 Geometrical Optics | |
| | Ch16 Interference of Light | |
| | Ch17 Diffraction of Light | |
| | Ch18 Polarization of Light | |
| | Part Six Fundamentals of Modern Physics | |
| | Ch19 Brief Introduction of Quantum Mechanics | |
| | Ch20 Brief Introduction of Solid Physics Nuclear Physics | |
| | and Astrophysics | |
| | • College Physics Experiment (1): | |
| | 1. Introduction | |
| | 2. Length measurement | |
| | 3. Optical lever measuring metal linear expansion | |
| | Coefficient | |
| | 4. Adjustment of Michelson interferometer and use | |
| | 5. Principle and application of oscillograph | |
| | Spectrometer adjustment and use | |
| | The torsion pendulum method for measuring | |
| | moment of inertia | |
| | 8. Measurement of low resistance | |
| | 9. Photoelectric tube volt-ampere characteristic curve | |
| | Measurement | |
| | College Physics Experiment (2): | |
| | 1. Ballistic galvanometer to measure capacitance | |
| | 2. Franck Hertz experiment | |
| | 3. Hall effect | |
| | The measurement of the velocity of sound | |
| | 5. Grating spectrometer to measure the H atom RH | |
| | 6. Metal electric work function measurement | |
| | 7. Millikan Oil Drop Experiment | |
| | 8. The Planck constant by photoelectric effect | |
| Study and examination | College Physics A(1) : written examination; | |
| requirements and forms of | College Physics A(2): written examination; | |
| examination | College Physics Experiment (1): Students should | |
| | write 9 experiment reports. | |
| | College Physics Experiment (2): Students should | |
| | write experiment reports and Independently | |
| | | |
| Media employed | complete one design experiment. Beamer and board/whiteboard, electronic scripts, ppt | |
| | projection, General Physics Network center of University | |
| | of Shanghai for Science and Technology | |

| | language and Some previous programming experience |
| Module objectives/intended | Course goals |
| learning outcomes | With an emphasis on a computer science module, |
| | students will gain an Professional and improved |
| | knowledge of computer programming, software design |
| | and system development; The aim of the module is to |
| | make the students own the basic characteristic and |
| | skills to work as a primary optical and electrical engineer |
| | after learning the advanced optics module. |
| | |
| | • Learning objectives |
| | On successful learning of this course module, the |
| | student should be able to demonstrate the following |
| | learning outcomes: |
| | 1. Understand the components of a computer system |
| | its functions. |
| | 2. Understand the software development and the |
| | problem solving. |
| | 3. Understand how this foundation can lead to more |

| | advanced courses in computer science. |
|---------|---|
| | 4. Be able to design and implement programs in |
| | Scheme that demonstrate the concepts covered in the |
| | course. |
| | 5. Be able to read and modify a substantial program, if |
| | it is written in exemplary style. |
| | 6. Be able to develop a program and debug a program; |
| | Identify and correct errors and add or remove from |
| | existing code. |
| | 7. Gain experience working with a large program, |
| | modifying existing code of a large program and |
| | expanding existing code. |

| | Associate Prof. XIAO ErLiang |
| | Associate Prof. SUI Guorong |
| | Lecture HU Qi |
| | Lecture FANG Baoying |
| Language | English /Chinese |
| Relation to curriculum | |
| Type of teaching, contact | Obligatory Lecture, seminar / discussion, professional software |
| hours | practice based tuition for CPU system design/15hours |
| | per week of the module(cpu and FPGA) |
| Workload | Tuition time: 11 hours per week |
| WORKIOAG | |
| Credit points | Self-study: 14 hours per week |
| Requirements according to the | 15 |
| examination regulations | Homework , Performance and intermediate |
| Recommended prerequisites | examination 30%;Final examination 70%. |
| Recommended prerequisites | Basic knowledge of physics, electronic and the |
| Module objectives/intended | Computer Science Module |
| learning outcomes | • Course goals |
| | With an emphasis on Microcontroller module, |
| | students will gain an Professional and improved |
| | knowledge of Microcontroller & its Application and |
| | FPGA & its application |
| | • Learning objectives |
| | On successful learning of this course module, the |
| | student should be able to demonstrate the following |
| | learning outcomes: |
| | 1. Mastering the working principle of the single-chip |
| | microcomputers, the instruction sets |
| | 2. Mastering the working principle of FPGA |
| | 3. Understanding assembly language programming |
| | skills, interface technology and practical applications |
| | 4. Understanding to design a simple microcontroller |
| | applications |

| University of Shanghai for Sc | |
|-------------------------------|--|
| | 5. Mastering FPGA design from RTL design, functional |
| | simulation and synthesis |
| | 6. Mastering to accomplish complex logic design |
| | independently |
| | 7. Understanding to use FPGA designing embedded |
| | system |
| Content | Microcontroller and its Application(1-2): |
| | General Introduction; |
| | Introduction the structure and working principle of the |
| | microcontroller; |
| | Introduction microcontroller addressing modes, |
| | instruction sets and its application design; |
| | Introduction Hardware interface design of the |
| | microcontroller; |
| | Introduction to use microcontroller device for |
| | debugging; |
| | Introduction to solve the problem of design engineering: |
| | product design mission statement, putting forward a |
| | proposal to design and debug software and hardware |
| | systems based on microcontroller. |
| | • Microcontroller I Experiment(1-2) and |
| | Microcontroller II Design: |
| | Enhance the basic knowledge of microcontroller design |
| | and FPGA design ; |
| | Take a practical electronic system based on |
| | microcontroller as the example, introducing and |
| | analyzing the design processing the design basic ideas; |
| | Take a practical electronic system based on FPGA as |
| | the example, introducing and analyzing the design |
| | processing the design basic ideas; |
| | Students are required to solve a practical electronic |
| | system design and FPGA system design by themselves |
| | using the learned knowledge and skills; |
| | FPGA and its application: |
| | General Introduction; |
| | Describe the use of methods and techniques for FPGA |
| | design software; |
| | Introduction methods based on Verilog HDL / VHDL |
| | Design, simulation and RTL design; |
| | Describe the FPGA design principles and common use of |
| | IP blocks; |
| | |
| | Describe the principle of four commonly used operating |
| | skills in FPGA design ; |

| | Introduces the application of FPGA in electronic |
|---|---|
| | products. |
| Study and examination requirements and forms of examination | Microcontroller and its Application(1-2): written examination; Microcontroller I Experiment(1-2) :submit individual design work combined with the oral examination; FPGA and its Application: written examination; Microcontroller II Design: submit individual design work combined with the oral examination; |
| Media employed | Beamer and board/whiteboard, electronic scripts, ppt projection, computer practicing center, and working documents; |

| Semester(s) in which the module is taught | 3or4or5 | |
| Person responsible for the module | Prof. Li Xiangning | |
| Lecturer | Prof. Dr. Jia Hongzhi | |
| | Associate Prof. Dr. YANG Bo | |
| | Associate Prof. Dr. PENG Yan | |
| | Associate Prof. Dr. LIANG binming | |
| | Associate Prof. Dr. GUO Hanming | |
| Language | English /Chinese | |
| Relation to curriculum | Obligatory | |
| Type of teaching, contact | Lecture, seminar / discussion, laboratory experiment | |
| hours | based on tuition for optical theory. | |
| Workload | Tuition time: 9 hours per week | |
| | Self-study: 11 hours per week | |
| Credit points | 12 | |
| Requirements according to the | Homework ,Performance and intermediate | |
| examination regulations | examination 30%; Final examination 70%. | |
| Recommended prerequisites | basic knowledge of geometry, mathematics, physics, | |
| | Applied Optics , etc. | |
| Module objectives/intended | Course goals | |
| learning outcomes | Focusing on optical engineering, students will obtain | |
| | professional and improved knowledge of geometrical | |
| | optics, wave optics and advanced optics development. | |
| | • Learning objectives | |
| | After successful studying of this course module, | |
| | Students can acquire the following knowledge and | |
| | skills : | |
| | 1. Mastering the basic theory of geometrical optics | |
| | and wave optics. | |
| | Knowing well about the concepts of the basic laws | |
| | of geometrical optics, Gaussian optics, aberrations, | |
| | | |
| | the light wave properties of interference, diffraction | |
| | and polarization. | |
| | 3. Analyzing the aberrations of an optical system, | |
| | knowing that what's the main aberration, and | |
| | understanding well about the ideal optical system. | |

| University of Shanghai for Sc | ience and Technology |
|-------------------------------|---|
| | 4. Primary knowledge of lenses, analyzing and |
| | designing the optical system by laboratory |
| | experiment, such as, microscopy system, telescope |
| | system, objective lens and other optical elements. |
| | 5. Understanding the typical installations of |
| | interference, diffraction, polarization and their |
| | applications. |
| | 6. Basic theory and dealing method of solving practical |
| | optical problems. |
| | 7. Knowing how to apply these knowledge into optical |
| | system. |
| | 8. Expanding student's thinking in the geometrical |
| | optics and wave optics field. |
| | After learning the optical engineering module, students |
| | own the basic characteristic and skills of geometrical |
| | optics, wave optics, and can apply them into practice. |
| Content | • Optical Engineering (1-2): |
| | Geometrical Optics: |
| | General Introduction; |
| | The basic laws of geometrical optics and the concept |
| | of Objects and imaging, |
| | Coaxial spherical optical system, |
| | Ideal optical system, |
| | Planar systems, |
| | Beam limits of the optical system, |
| | Gaussian optics, aberrations, |
| | The overview of aberration, |
| | Basis of Photometric and colorimetric, |
| | Typical optical system, |
| | Modern optical systems. |
| | Wave Optics: |
| | Basic theory of electromagnetic waves; |
| | The composition of light waves; |
| | The interference of light waves; |
| | Typical installation of interference and their |
| | applications; |
| | The diffraction of light waves; |
| | Typical installation of diffraction and their applications; |
| | The polarization of light waves; |
| | The generation of polarized light waves and their |
| | applications; |
| | Conclusion. |
| | • Lab. Applied Optics (1-2): |
| | |

| University of Shanghai for Science and Technology | | |
|--|--|--|
| | Strengthen the basic knowledge of optical system | |
| | through experiments. | |
| | Take a practical optical system as an example, | |
| | introducing the imaging process and analyzing the main | |
| | aberrations of the system. | |
| | Students are required to set up a practical optical system | |
| | analyze by themselves with the learned knowledge and | |
| | skills. | |
| | Optical system simulation with software : | |
| | Students should learn some related software to simulate | |
| | optical system function on the basis of understanding | |
| Church and an anti- | theoretical knowledge. | |
| Study and examination requirements and forms of | • Optical Engineering (1-2) : written examination; | |
| examination | • Lab. Applied Optics (1-2): submitting experimental | |
| examination | report with analysis. | |
| | Optical system simulation with software: | |
| Media employed | submitting experimental report with analysis. Beamer and board/whiteboard, electronic scripts, ppt | |
| | projection, and working documents. | |
| Reading list | Optical Engineering, Modern Optical Engineering, R. R. | Person responsible for the module | Associate Prof. XIN Shangzhi |
| Lecturer | Associate Prof. XIN Shangzhi |
| | Associate Prof. LIU Jian |
| | Associate Prof. QIAN Weikang |
| | Lecturer XIE Ming |
| Language | Chinese |
| Relation to curriculum | Obligatory |
| Type of teaching, contact hours | Lecture, Lab/16 hours per week |
| Workload | Tuition time: 12 hours per week |
| | Self-study: 15 hours per week |
| Credit points | 16 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Basic Mathematics A, Physics, electric circuit |
| Module objectives/intended | Course goal: |
| learning outcomes | With an emphasis on the basic knowledge and |
| | basic concept of electronic technology, learn the |
| | methods of analyze and design of electronic |
| | circuits. The students will gain the ability to |
| | analyze various circuits and make good foundation |
| | for electronic technology and experiments. |
| | Learning objectives |
| | Making students : |
| | 1. Understand the concepts of employing simple |
| | models to represent non-linear and active |
| | elements-such as the MOSFET-in circuits. |
| | 2. Understand the basic electrical engineering |
| | principles and abstractions on which the design of |
| | electronic systems is based. |
| | 3. Use these engineering abstractions to analyze |
| | and design simple electronic circuits. |
| | 4. Derive a state diagram from a textual |
| | specification according to an appropriate FSM |

| University of Shanghai for Science a | |
|--------------------------------------|---|
| | model; i.e. sequence recognizers, serial |
| | calculators, sequence controllers. |
| | 5. Show knowledge about encoding strategies |
| | and understand impacts on next state forming |
| | logic circuit. |
| | 6. Show knowledge to choose synthesizable |
| | VHDL coding style and to apply appropriate signal |
| | types. |
| | 7. Show ability to implement signed integer |
| | arithmetic to VHDL modeling of multiply and |
| | accumulate data path. |
| Content | Analog Electronic Tech. |
| | 1. PN Junction; |
| | 2. Semiconductor Diodes; |
| | 3. Semiconductor transistors; |
| | 4. Field-Effect Transistors; |
| | 5. Basic amplifiers; |
| | 6. differential amplifiers; |
| | 7. power amplifier; |
| | 8. Integrated operational amplifier and |
| | applications; |
| | 9. feedback; |
| | 10. signal generation circuits |
| | Digital Electronic Tech. |
| | 1. Boolean algebra and minimization techniques |
| | for combinational circuits. |
| | 2. Basic introduction into logic gate |
| | characteristics and design of sequential |
| | circuits. |
| | 3. Sequential circuits development methods |
| | based on Finite State Machine (FSM) |
| | descriptions. |
| | 4. Digital system design with VHDL based on |
| | FPGA platform. |
| | 5. Behavioral system modeling with a VHDL |
| | according to the register transfer level (RTL) |
| | description style. |
| | • Lab. Analog Electronic Tech.: |
| | 1. Diodes circuit; |
| | 2. Common-Emitter amplifier; |
| | 3. Common-Collector amplifier; |
| | 4. Multi-stage amplifiers; |
| | 5. differential amplifier; |

| Recommended prerequisites | Basic knowledge of physics, electronic and the |
| | Technical Optics Module (Applied Optics, |
| | Engineering Optics etc) |
| Module objectives/intended learning | Course goals |
| outcomes | With an emphasis on an advanced optics |
| | module, students will gain an Professional and |
| | improved knowledge of optics, optical system |
| | design and advanced optics development. |
| | Learning objectives |
| | On successful learning of this course module, |
| | the student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Master the basic theory of photo-electric |
| | and electric-photo conversion. |
| | 2. Know well about the characteristics and |
| | structures of typical photo-electric and |
| | electric-photo conversion devices and |
| | elements. |
| | 3. Understanding the use of photo-electric |
| | and electric-photo conversion devices and |

| , . | echnology | | |
|-----------|---|--|--|
| elements. | | | |
| | 4. Expanding student's thinking in | | |
| | optoelectronics field; | | |
| | -It provides a basic theory and dealing method | | |
| | of solving practical optoelectronics problems. | | |
| | - Gaining practical abilities for which | | |
| | knowledge is used in the practical | | |
| | optoelectronics system. | | |
| | - Students will be familiar with the principle, | | |
| | characteristics and structures of typical | | |
| | photo-electric and electric-photo conversion | | |
| | devices and elements. | | |
| | -Understanding how to apply the knowledge | | |
| | into the optoelectronics system from sorts of | | |
| | exercises Given primary ability to analyze | | |
| | and design the optoelectronics system based | | |
| | on the photo-electric and electric-photo | | |
| | conversion devices and elements. | | |
| | -It aims the students to own the basic | | |
| | characteristic and skills to work as a primary | | |
| | optical and electrical engineer after learning | | |
| | the optoelectronics module. | | |

| taught | |
| Person responsible for the module | Prof. Dr. CHEN Jiabi |
| Lecturer | Prof. MA Junshan |
| | Prof. CHEN Jiabi |
| | Associate Prof .Dr. GUO Hanming |
| | Associate Prof. Dr. LIANG Binming |
| | Associate Prof. Dr. PENG Runling |
| Language | English/Chinese |
| Relation to curriculum | Obligatory |
| Type of teaching, contact hours | Lecture, seminar / discussion/6 hours per week |
| | of the module |
| Workload | Tuition time: 4 hours per week |
| | Self-study: 5 hours per week |
| Credit points | 6 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%;Final examination 70%. |
| Recommended prerequisites | Basic knowledge of physics, optics and Basic |
| | Mathematics |
| Module objectives/intended learning | Course goals |
| outcomes | Help students gain professional and improved |
| | knowledge of Laser principle, Laser technology |
| | and Laser application. |
| | Learning objectives |
| | On successful learning of this course module, |
| | the student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Grasping the basic principle to create |
| | laser. |
| | 2. Understanding the output quality of laser. |
| | 3. Understanding the characteristics of laser |
| | beam and grasping how to transform laser |
| | beam. |
| | 4. Understanding the application of laser in |
| | measurement, fabrication, communication |
| | and optical holography etc. |
| | 5. Grasping some typical methods of how to |
| | apply laser in measurement, fabrication |

| | etc. |
|------------------------------------|---|
| Content | Laser Technology: |
| | General Introduction; |
| | Interaction between light and matter; Profile |
| | of spectrum; Creation of laser; |
| | Structure of lasers; Laser mode; Rate equation; |
| | Gain; Gain saturation; |
| | Field distribution in optical resonant cavity; |
| | Transmission characteristics of laser beam in |
| | confocal cavity; Gaussian beam and its |
| | transfomation by thin lens; Output power of |
| | lasers; |
| | Frequency-selecting technology; Frequency |
| | stabilization technique; Q-switched technique; |
| | Modulation and deflection technique for |
| | lasers; |
| | Solid lasers; Gas lasers; Dye lasers; |
| | Semiconductor lasers; |
| | Length, velocity, distance and collimation |
| | measurement of laser; |
| | Laser application in fabrication; |
| | • Laser Lab. : |
| | Enhance the basic knowledge of laser |
| | technology and laser application; |
| | Precise displacement measurement by laser |
| | interfermetry; |
| | Babinet's principle and precision measurement |
| | of the diameter of thin thread. |
| Study and examination requirements | • Laser Technology: written examination; |
| and forms of examination | • Laser Lab.: submit individual design work |
| | combined with the oral examination |
| Media employed | Beamer and board/whiteboard, electronic |
| | scripts, ppt projection, computer practicing |
| | center, and working documents |
| Reading list | Mark Csele, Fundamentals of Light |
| | Sources and Lasers, John Wiley & Sons, |

| | Self-study: 5 hours per week |
| Credit points | 6 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%;Final examination 70%. |
| Recommended prerequisites | Basic knowledge of physics, electronic and the |
| | Technical Optics Module (Applied Optics, |
| | Engineering Optics etc) |
| Module objectives/intended learning | Course goals |
| outcomes | Enable students to master the |
| | basic characteristics of optical fiber |
| | communication, as well as the |
| | principle of optical fiber communication |
| | systems, and lay a solid |
| | foundation for future engineering applications |
| | and postgraduate studies |
| | Learning objectives |
| | On successful learning of this course module, |
| | the student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Understand the characteristics of optical |
| | fiber communication |
| | 2. Establish the concept of optical fiber |
| | communication systems, understand the |
| | history of the development of optical fiber |
| | communication |
| | 3. Master principle of optical fiber |
| | transmission |

| University of Snanghai for Science and To | |
|---|---|
| | 4. Master the principle of laser and |
| | optical detector |
| | 5. Master optical modulator, optical |
| | transmitter and optical receiver structure |
| | and working principle. |
| Content | Fiber Optics and Opt. Comm. : |
| | Basic knowledge and |
| | concepts of development and |
| | evolution of the optical fiber communication; |
| | Principle of optical fiber transmission; |
| | The design principles of optical fibers / |
| | cables, optical active /passive components and |
| | fiber optic communication system ; |
| | Typical fiber transmission systems, optical |
| | amplification and wavelength division |
| | multiplexing technology |
| | Lab. Opt. Comm. |
| | Enhance the basic knowledge of optical fiber |
| | communication systems ; |
| | Students are required to solve a practical |
| | optical fiber communication systems design by |
| | themselves using the learned knowledge and |
| | skills. |
| Study and examination requirements | Fiber Optics and Opt. Comm. : written |

| | Lecturer DONG Xiangmei |
| Language | English/Chinese |
| Relation to curriculum | Obligatory |
| Type of teaching, contact hours | Lecture, seminar / discussion, professional |
| | software practice based tuition for advanced |
| | optical system design/11hours per week of the |
| | module |
| Workload | Tuition time: 8 hours per week |
| | Self-study: 10 hours per week |
| Credit points | 11 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%;Final examination 70%. |
| Recommended prerequisites | Basic knowledge of physics, electronic and the |
| | Technical Optics Module (Applied Optics, |
| | Engineering Optics etc) |
| Module objectives/intended learning | Course goals |
| outcomes | With an emphasis on an advanced optics |
| | module, students will gain an Professional and |
| | improved knowledge of optics, optical system |
| | design and advanced optics development. |
| | Learning objectives |
| | On successful learning of this course module, |
| | the student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Correctly identify the optical system; |
| | including the basic theory of Fourier |
| | Optics, the principle of optical design, the |

| | basic progress of the optical system design |
|---------|--|
| | software and the related advanced |
| | improvement in optical and electrical |
| | research fields. |
| | 2. Given detailed criterion of judging the |
| | quality of optical imaging such as the MTF |
| | curves, the Spot diagram etc. |
| | 3. Understanding the use of the advanced |
| | software to realize the design objective. |
| | 4. Expanding student's thinking in an |
| | advanced optics field; |
| | -It provides a basic theory and dealing |
| | method of solving practical optical |
| | problems. |
| | - Gaining practical abilities for which |
| | knowledge is used in the practical Optical |
| | system design. |
| | - Students will be familiar with the operation |
| | of general optical design software, such as |
| | ZEMAX, Code V etc. |
| | -Understanding how to apply the knowledge |
| | into the optical and electrical system from |
| | sorts of exercises Given primary ability to |
| | design the optical microscopy system, |
| | telescope system, objective lens and other |
| | optical elements and systems. |
| | -Given ability to solve the problem in the |
| | complicated opto-electrical system, such as |
| | the LED illumination, projection system. |
| | - Using the advanced optical theory such as |
| | the knowledge the Fourier Optics to evaluate |
| | and analysis the optical and electrical system |
| | problems. |
| | -It aims the students to own the basic |
| | characteristic and skills to work as a primary |
| | optical and electrical engineer after learning |
| | the advanced optics module. |
| Content | Optical Information Processing: |
| | General Introduction; |
| | Analysis of Two-dimensional Signals and |
| | Systems; Foundations of Scalar Diffraction |
| | Theory; |
| | Fresnel and Fraunhofer Diffraction; |
| | |

| | Wave-optics Analysis of Coherent Optical |
|------------------------------------|--|
| | systems; |
| | Frequency Analysis of Optical Imaging Systems; |
| | Optical Transform Function; |
| | Holography and holographic optical devices; |
| | Optical Information Processing with coherent |
| | optical system; |
| | Optical Information Processing with white light |
| | system; Conclusion; |
| | Computer aided optical design: |
| | Review the basic optical design knowledge |
| | including confocal system, projection system, |
| | telescope system, microscopy system etc; |
| | Review the basic imaging aberrations and its |
| | characteristics; |
| | Introduction the principle and the criteria of |
| | judging the optical system design (for example, |
| | Strehl judging criteria, Spot diagram; |
| | Describe the principle and the basic operations |
| | of ZEMAX software; |
| | Learning Seven samples for the beginning of |
| | using ZEMAX. |
| | Providing practicing hours of the students to |
| | operate the ZEMAX software; |
| | Lab. Optical design |
| | Enhance the basic knowledge of optical design; |
| | Take a practical optical system as the example, |
| | introducing and analysing the design |
| | processing the design basic ideas; |
| | students are required to solve a practical |
| | optical system design by themselves using the |
| | learned knowledges and skills; |
| | Academic seminar |
| | Famous scientists in the opto-electrons and |
| | information Engineering field and relative |
| | fields, such as electrons, physics etc are invited |
| | to show an advanced development reports for |
| | the under-graduated students. |
| | Learning contents includes the Therherz, black |
| | silicon, photolytic devices , quantum dots etc. |
| | students are required to write the listening |
| | report for the academic seminar. |
| Study and examination requirements | Optical Information Processing: written |

| and forms of examination | examination; |
|--------------------------|---|
| | • Computer aided optical design: software |
| | operation examination combined with the |
| | oral examination; |
| | • Lab. Optical design: submit individual |
| | design work combined with the oral |
| | examination; |
| | Academic Seminar: students should |
| | submit the listening report for each |
| | seminar. |
| Media employed | Beamer and board/whiteboard, electronic |
| | scripts, ppt projection, computer practicing |
| | center, and working documents; |
| Reading list | Joseph W.Goodman, Introduction to |

| Courses, if applicable | - |
| Semester(s) in which the module is | 3or6 |
| taught | |
| Person responsible for the module | Prof. Dr. HOU Wenmei and Prof. Dr. YANG |
| | Yongcai |
| Lecturer | Prof. Dr. YANG Yongcai |
| | Prof. Dr. HOU Wenmei |
| | Prof. Dr. XU Jian |
| | Associate Prof. Dr. XU Boqing |
| | Lecturer YANG Hui |
| | Lecturer NI Yi |
| Language | English/Chinese |
| Relation to curriculum | Obligatory |
| Type of teaching, contact hours | Seminar based tuition with several |
| | instrumental instructions / 8 lecture hours per |
| | week |
| Workload | Tuition time: 6 hours per week |
| | Self-study: 7 hours per week |
| Credit points | 8 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Analog Circuit and Digital Circuit, Basic courses |
| | of physics, electronic and optics |
| Module objectives/intended learning | Course goals |
| outcomes | With an emphasis on the technique of Weak |
| | Signal detection, students will gain an |
| | Professional and improved knowledge of the |
| | noise of the measurement system, Lock-in |
| | amplifier, sampling integrator and photon |
| | counter. Students should learn basic |
| | knowledge of various nano-measurement |
| | methods with understanding |
| | of the underlying interaction mechanisms. |
| | Learning objectives |
| | 1. On successful learning of this course |
| | module, the student should be able to |
| | demonstrate the following learning outcomes: |

| | centeresy |
|---------|--|
| | Student shall obtain basic theoretical |
| | knowledge of the interference and noise, |
| | detecting and controlling weak signal, to grasp |
| | the basic methods and skills to design the |
| | devices for weak signal measurement and |
| | control, to improve the accuracy of |
| | measurement to the maximum and reduce |
| | its cost as much as possible. |
| | 2. Students will learn how to analysis and |
| | design measurement process for different |
| | tasks. To achieve this purpose the students |
| | should also learn the knowledge about |
| | nanotechnology, a broad, highly |
| | interdisciplinary and still evolving field, one of |
| | most promising technology in the new century. |
| Content | Signals and Systems: |
| | This course contains a comprehensive |
| | discussion of continuous and discrete time |
| | signals and systems with many examples from |
| | MATLAB—software used to write efficient, |
| | compact programs to solve electrical and |
| | computer engineering problems of varying |
| | complexity. It discusses Laplace transformation |
| | and circuit analysis, impulse response, Fourier |
| | series, Z transform, and the Discrete Fourier |
| | transform and FFT. Solutions to all exercises |
| | are included in this revised edition. |
| | Nanometrology: |
| | General introduction: |
| | Principle of operation, instrumentation and |
| | probes of Scanning Tunneling Microscopy and |
| | Atomic Force Microscope and their |
| | instrumentation and analyses. |
| | , Introduction of Nanotechnology: |
| | Include micro- and nanofabrication and |
| | stamping techniques for micro- and |
| | nanofabrication, MEMS/NEMS devices and |
| | applications. It will also introduce the basic |
| | knowledge of Carbon nanotubes and |
| | nanowires. An important area is the |
| | fabrications and applications of MEMS/NEMS |
| | devices. |
| | Weak Signal Detection: |
| | |

| University of Shanghai for Science and Te | ecnnology | |
|--|---|--|
| | Theoretical teaching: | |
| | The basic concept of noise, the reason for | |
| | thermal noise and excess noise of resistance, | |
| | the noise of active device, the design of | |
| | low-noise preamplifier, the concept of | |
| | correlation function and correlation receiver, | |
| | Lock-in amplifier, the correlator of lock-in | |
| | amplifier, synchronous integrator, the | |
| | application of lock-in amplifier, the physical | |
| | process of sampling, sampling theorem, | |
| | real-time sampling and transform sampling, | |
| | the principles and ways of working of sampling | |
| | integrator, the principle of the photon counter, | |
| | photomultiplier tube in photon counter, | |
| | amplifier and discriminator, measurement | |
| | methods of photon counter. | |
| | Practice: | |
| | The research of correlator and the | |
| | measurement of main parameters, know the | |
| | principle of correlator and its output | |
| | characterize. | |
| Study and avanination requirements | | |

| Module designation | Elective Course-Image Processing |
|-------------------------------------|---|
| Module level, if applicable | |
| Code, if applicable | - |
| Subtitle, if applicable | - |
| Courses, if applicable | - |
| Semester(s) in which the module is | 5or6 |
| taught | |
| Person responsible for the module | Associate Prof. Dr. CHEN Qing |
| Lecturer | Associate Prof. Dr. XU Boging |
| | Lecturer Dr. HAN Yanfang |
| | Lecturer Dr. WANG Yingkun |
| Language | English /Chinese |
| Relation to curriculum | Elective |
| Type of teaching, contact hours | Lecture, seminar / discussion, lab work, 2 |
| | hours per week |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Prerequisites by Topic: |
| | 1. Mastery of Matlab programming language. |
| | 2. Familiarity with calculus and statistics. |
| | 3. Exposure to linear algebra and linear |
| | systems. |
| Module objectives/intended learning | The aim of this course is to introduce students |
| outcomes | the necessary background, the basic principles |
| | and concepts, the typical algorithms, and the |
| | applications of digital image processing. To |
| | know and understand how computers can |
| | process digital images. To know some of the |
| | basic operations (their basis, implementation |
| | and consequences) in image processing. To |
| | know of the relation to signal processing and |
| | other fields. |
| Content | Theoretical Contents |
| | 1. Introduction: Overview of Image |
| | Processing and its applications. |
| | 2. Digital Image Fundamentals: Image |
| | digitization, basic relationships between pixels, |
| | linear and nonlinear operations. |

| University of Shanghai for Science and Te | echnology | |
|---|--|--|
| | 3. Image Enhancement in the Spatial | |
| | Domain: Gray-level mapping, histogram, | |
| | Spatial-domain filter, Edge detection. | |
| | 4. Image Enhancement in the Frequency | |
| | Domain: Fourier transformation, Frequency | |
| | domain filtering. | |
| | 5. Color Image Processing: Color | |
| | fundamentals, Color models, pseudocolor | |
| | image processing, Color image smoothing and | |
| | sharpening. | |
| | 6. Image Compression: Image compression | |
| | models, Lossless compression versus lossy | |
| | compression, image compression standards. | |
| | Lab works: | |
| | 1. MATLAB & Image Processing Toolbox | |
| | Implementation of gray scale | |
| | transformations, spatial and frequency | |
| | filtering | |
| | 3. Implementation of image compression | |
| | Seminar | |
| | 4. Discussion of recent advances and current | |
| | research trends in digital image processing | |
| | theory, algorithms and their applications | |
| Study and examination requirements | The semester grade will be based upon | |
| and forms of examination | assignments issued in class (20%), lab works | |
| | (25%), seminar / discussion (5%), and a | |
| | comprehensive final examination (50%). | |
| Media employed | Beamer and board/whiteboard, electronic | |
| | scripts, ppt projection, computer practicing | |
| | center, and working documents; | |

| Module level, if applicable | - |
| Code, if applicable | - |
| Subtitle, if applicable | - |
| Courses, if applicable | - |
| Semester(s) in which the module is taught | 5or6 |
| Person responsible for the module | Prof. Dr. ZHU Yiming |
| Lecturer | Prof. Dr. ZHU Yiming |
| | Lecturer XU Gongjie |
| Language | English |
| Relation to curriculum | Elective |
| Type of teaching, contact hours | Classroom, class assignments and |
| | discussions combined. |
| | 2 hours per week |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Advanced Mathematics, University physics, |
| | semiconductor physics, electronic |
| | technology |
| Module objectives/intended learning | This course is the optical and electronic |
| outcomes | information engineering undergraduate |
| | professional training. It is a basic required |
| | course, to introduce the principles and the |
| | basic applications of the photovoltaic |
| | technology, focusing on working principles |
| | and applications of photoelectric sensors, |
| | the transformation and processing of the |
| | photovoltaic signals. The objective of the |
| | course is designed to achieve the ability to |
| | train students in scientific and |
| | technological innovation. Basic elements |
| | include: the status and role of the |
| | photoelectric sensor, definitions, |
| | classifications, trends, selection principles, |
| | general characteristics and some basic |
| | knowledge; describes the manufacturing of |
| | photovoltaic cells, the design of |
| | photovoltaic system, the processing of |

| University of Shanghai for Science and Techn | ology |
|--|--|
| | photovoltaic materials and other new |
| | technologies. We aim to cultivate the |
| | undergraduate students into a potential |
| | researcher or project designer through the |
| | study. |
| Content | Chapter 1. Summary and Subject |
| | 1. Microelectronics manufacturing |
| | introduction |
| | 2. Semiconductor substrate |
| | Requirements: to master the history of the |
| | semiconductor industry, as well as |
| | fundamentals of semiconductor materials. |
| | Chapter 2. Single Process |
| | Technology1:Heat treatment & Single |
| | process |
| | 1. Diffusion |
| | 2. Thermal oxidization |
| | 3. Ion implantation |
| | 4. Rapid thermal process |
| | Requirements: to master the processes and |
| | methods of diffusion, thermal oxidation, |
| | ion implantation and rapid thermal |
| | annealing in IC technology. |
| | Chapter 3. Single Process |
| | Technology2:Pattern Transfer |
| | 1. Optical lithography |
| | 2. Photoresist |
| | 3. Non-optical lithography |
| | 4. Vacuum etching & plasma |
| | 5. Etching |
| | Requirements: to master various pattern |
| | transfer methods and processes in IC |
| | technology, including lithography, ion beam |
| | etching, and vacuum etching technology; to |
| | understand the photoresists' features. |
| Study and examination requirements and | Test results based on class notes, class |
| forms of examination | assignments and class discussion, final |
| | reports assessed. |
| Media employed | Beamer and board/whiteboard, electronic |
| incula chipioyea | scripts, ppt projection, computer practicing |
| | center, and working documents |
| Reading list | Didier Decoster, Joseph Harari, |
| | |
| | Optoelectronic Sensors, Wiley-ISTE, |

| Lecturer | Prof. MU Pingan |
| | Lecturer HU Qi |
| Language | Chinese |
| Relation to curriculum | Elective |
| Type of teaching, contact hours | Lecture / 2hours per week of the module |
| Workload | Tuition time: 1 hours per week |
| WORKIOAG | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%;Final examination 70%. |
| Recommended prerequisites | Basic knowledge of Analogical electronic |
| Recommended prerequisites | technique and Digital electronic technique |
| Module objectives/intended learning | Course goals |
| outcomes | MCC module emphasizes on how to |
| outcomes | establish a bridge between electronic |
| | technology and measurement & control. By |
| | using electronic technology, students can |
| | deal with various signal processing |
| | problems of measurement & control |
| | system. |
| | Learning objectives |
| | On successful learning of MCC module, the |
| | student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Be Familiar with composition and basic |
| | principle of all kinds of measurement & |
| | control circuit prototype. |
| | 2. Mastering common functional circuit of |
| | measurement & control system, the |
| | related advanced technology in |
| | measurement & control field. |
| | 3. Understanding design methods and |
| | applied technology of measurement & |

| University of Shanghai for Science and Techn | |
|--|--|
| | control circuit. |
| | 4. Getting an all-round understanding of |
| | anti-interference technology of the |
| | measurement & control system. |
| | -It provides a basic theory and processing |
| | method of solving practical measurement |
| | & control problems. |
| | -Fostering students' practice ability and |
| | further improve their ability of innovation |
| | consciousness. |
| | -Given primary ability to design and select |
| | electronic instrument and functional |
| | circuit reasonably. |
| | -Improving ability to analysis circuit and |
| | test circuit performance during debugging |
| | -It aims the students to own the basic |
| | knowledge and skills to work as a |
| | measurement and control engineer after |
| | learning MCC module. |
| Content | General Introduction; |
| | Signal amplification circuit; |
| | Signal modulation and demodulation |
| | circuit; |
| | Signal separation circuit; |
| | Signal computation circuit; |
| | Signal conversion circuit; |
| | Signal subdivision and differentiate |
| | direction circuit; |
| | Continuous signal-controlled circuit. |
| Study and examination requirements and | written examination |
| forms of examination | |
| Media employed | Beamer and board/whiteboard |
| Reading list | Zhang GuoXiong, Measurement and |
| | control circuit, Mechanical Industry |

| Type of teaching, contact hours | Lecture, seminar / discussion, /2hours per |
| | week of the module |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework , Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Basic knowledge of physics, electronic |
| Module objectives/intended learning | Course goals |
| outcomes | With an emphasis on the infrared technology, |
| | students will gain professional and improved |
| | knowledge of infrared technology and |
| | advanced infrared technology |
| | development. |
| | Learning objectives |
| | On successful learning of this course module, |
| | the student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Correctly identify the infrared system; |
| | including the basic theory of infrared radiation, |
| | the principle of infrared devices, the structure |
| | of the infrared system and the related |
| | advanced improvement in infrared technology research fields. |
| | 2. Understanding the relative circuit in the |
| | infrared system. |
| | 3. Expanding student's thinking in an |
| | advanced infrared technology field; |
| | -It provides a basic theory and dealing method |

| of solving practical infrared problems. - Gaining practical abilities for which knowledge is used in the practical infrared system. - Students will be familiar with the structure of the infrared system. - understanding how to apply the knowledge into the infrared system from sorts of exercises. - Given primary ability to analyze and design the simple infrared system. - It aims the students to own the basic characteristic and skills to work as a primary optical and electrical engineer after learning the infrared technology module.ContentGeneral Introduction; The basic theory of infrared radiation and transmission; Introduction to the infrared radiation transmitted in the atmosphere; Infrared detectors; Relative circuit of infrared system; Infrared detectors; Relative circuit of infrared system; Introduction to the infrared system; Infrared system; Introduction to the typical infrared system; Infrared technology: written examination; |
|---|

| Module designation | Elective Course-Thin film technology |
|---|---|
| Module level, if applicable | - |
| Code, if applicable | - |
| Subtitle, if applicable | - |
| Courses, if applicable | - |
| Semester(s) in which the module is taught | 5or6 |
| Person responsible for the module | Prof. Dr. ZHANG Dawei |
| Lecturer | Prof. Dr. ZHANG Dawei |
| | Lecturer TAO Chunxian |
| Language | English /Chinese |
| Relation to curriculum | Elective |
| Type of teaching, contact hours | Lecture, seminar / discussion, professional |
| | software practice based tuition for optical |
| | film design/2hours per week of the module |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Basic knowledge of Physics, Optics, |
| | Material Technology |
| Module objectives/intended learning | Course goals |
| outcomes | Gain an Professional and improved |
| | knowledge of the science and engineering |
| | of optical film, such as substrate |
| | preparation, film design, heat treatment, |
| | spectrum, and related design & deposition |
| | technology. |
| | Learning objectives |
| | On successful learning of this course, the |
| | student should be able to demonstrate the |
| | following learning outcomes: |
| | 1. Understand the principles of Maxwell, |
| | and correctly identify the different |
| | design and application for functional |
| | film. |
| | 2. Master the fundamental and |
| | techniques of film design and |
| | deposition method. |
| | 3. Correctly select the right substrate and |
| | coating materials. |

| University of Shanghai for Science and Techn | ology |
|--|--|
| | 4. Compare different thin film |
| | technologies, and select the right |
| | method to form a thin film. |
| | By Interactive teaching and learning, |
| | students will practice their independent |
| | skills of investigation, manuscripts written |
| | and oral report. |
| Content | An introduction to thin film technology, |
| | Functional film design and application, |
| | include LED color film, Sensor film, laser |
| | film, and transparent conductive film, |
| | Thin films deposition, include physical |
| | deposition: evaporation and sputtering, |
| | chemical vapor deposition, and epitaxial |
| | growth, |
| | Conclusion; |
| Study and examination requirements and | Thin film technology :Examination and |
| forms of examination | homework |
| Media employed | Beamer and board/whiteboard, electronic |
| | scripts, ppt projection, and working |
| | documents; |
| Reading list | H Angus Macleod, Thin-film optical |
| | filters, Institute of physics publishing, |
| | 2001(Third Edition) |

| Person responsible for the module | Associate Prof. Dr. YANG Bo |
| Lecturer | Associate Prof. Dr. YANG Bo |
| | Lecturer ZHANG Wei |
| Language | Chinese |
| Relation to curriculum | Elective |
| Type of teaching, contact hours | Lecture / tuition for illumination optical |
| | system design using professional |
| | software/2hours per week of the module |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Basic knowledge of optics, electronic and |
| | the Technical Optics Module (Applied |
| | Optics, Engineering Optics etc) |
| Module objectives/intended learning | Course goals |
| outcomes | Learn basic knowledge of Radiometry and |
| | Photometry. Familiar with commercial CAD |
| | software for illumination system and |
| | Mechanical software. Have the ability of |
| | analysis and design of modern illumination |
| | system. |
| | Learning objectives |
| | On successful learning of this course |
| | module, the student should be able to |
| | demonstrate the following learning |
| | outcomes: |
| | 1. Correctly identify the illumination |
| | system; including the basic theory of |
| | Radiometry and Photometry, the basic |
| | progress of the optical system design |
| | software and the related advanced |
| | improvement in optical and electrical |

| University of Shanghai for Science and Techn | ology |
|--|--|
| | research fields. |
| | 2. Given detailed criterion of judging the |
| | quality of illumination such as the |
| | illumination uniformity etc. |
| | 3. Have the abilities for solve the practical |
| | illumination problems. |
| | - Familiar with the operation of general |
| | optical and mechanical design software, |
| | such as Lighttools, etc. |
| | - Given primary ability to design the |
| | illumination. |
| | -Given ability to solve the problem in the |
| | complicated opto-mechanical system, such |
| | as the LED illumination, projection system. |
| Content | Review the basic knowledge of Radiometry |
| | and Photometry; |
| | Review the basic illumination system and |
| | its characteristics; |
| | Introduction the principle and the criteria |
| | of evaluating the illumination system |
| | design (for example, illumination |
| | uniformity, Light distribution curve , |
| | efficiency, ect; |
| | Describe the principle and the basic |
| | operations of Lighttools software; |
| | Learning severial samples for the beginning |
| | of using Lighttools; |
| | Providing practicing hours of the students |
| | to operate the Lighttools software. |
| Study and examination requirements and | Modern illumination technology : software |
| forms of examination | operation examination combined with |
| | submitting individual design work. |
| Media employed | Beamer and board/whiteboard, electronic |
| | scripts, ppt projection, computer practicing |
| | center, and working documents; |
| Reading list | Roland Winston, Juan C. Minano and |
| | Pablo G. Benitez, Nonimaging Optics, |
| | Academic Press, 2005 |
| | Yu Daoyin, Tan Hengying, Optical |
| | Engineering, Mechanical Industrial |
| | Press, 2007(Second Edition) |

| Courses, if applicable | - |
| Semester(s) in which the module is taught | 5or6 |
| Person responsible for the module | Prof. Dr. ZHU Yiming |
| Lecturer | Prof. Dr. ZHU Yiming |
| | Lecturer XU Gongjie |
| Language | English |
| Relation to curriculum | Elective |
| Type of teaching, contact hours | Combination of class teaching, assignment |
| _ | and discussions./2 hours per week |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%; Final examination 70%. |
| Recommended prerequisites | Advanced Mathematics, University physics, |
| | semiconductor physics, electronic |
| | technology |
| Module objectives/intended learning | The purpose of this course is to |
| outcomes | systematically introduce the scientific |
| | principle and engineering technique in |
| | microelectronic fabrication for |
| | Optical-Electrical information division and |
| | metrical-controlled technology and |
| | equipment division (also for most science |
| | and engineering divisions). It covers some |
| | basic individual processes involved the IC |
| | manufacturing, which include thin films |
| | technology, lithography, vapor epitaxial |
| | growth methods and so on. For each |
| | individual process, its physical and chemical |
| | principle is presented, as well as its |
| | corresponding necessary equipment. These |
| | can help the students to known the |
| | advanced development of modern |
| | semiconductor IC technology, and to |
| | master some process techniques. This |

| | course is aimed at the next 10 years of |
|---------|---|
| | industrial development, the industrial |
| | adjustment and innovations, training a |
| | batch of semiconductor professional for |
| | national need. |
| | Notes: In real work, local engineers have to |
| | communicate with foreign engineers |
| | directly in English, since the key techniques |
| | of semiconductor IC fabrication lie in hands |
| | of American and European enterprises. |
| | Therefore, it is important to start a |
| | complete English course. It can enable |
| | students to acquire the professional |
| | knowledge, as well as the professional |
| | English words. It also help students who |
| | will contribute to semiconductor |
| | fabrication career to establish professional |
| | technique background and language basis. |
| Content | Chapter 1. Single Process Technology3: |
| | Thin Film |
| | 1. Physical deposition: evaporation & |
| | sputtering |
| | 2. Chemical vapor deposition |
| | 3. Epitaxial growth |
| | Requirements: to master the thin films |
| | process in semiconductor IC technology, |
| | including the processes of thermal |
| | evaporation to form thin films, |
| | magnetic-controlled sputtering, chemical |
| | vapor deposition, and liquid phase epitaxial |
| | growth technique. |
| | Chapter 2. Integration Technology |
| | 1. Isolation, contact and metallization of |
| | devices |
| | 2. CMOS Technology |
| | 3. GaAs Technology |
| | 4. Silicon bipolar technology |
| | 5. MEMS |
| | 6. IC Manufacturing |
| | Requirements: to understand the |
| | semiconductor integration technology, |
| | including CMOS integrated technology, |
| | GaAs growth techniques, MEMS |

| | technology, and manufacturing technology |
|--|--|
| | of RF IC. |
| Study and examination requirements and | Assessments based on class notes, |
| forms of examination | assignments, discussions and final reports |
| Media employed | Beamer and board/whiteboard, electronic |
| | scripts, ppt projection, computer practicing |
| | center, and working documents; |
| Reading list | USA Stephen, A.Campbelln, The |
| | Science and Engineering of |
| | Microelectronic Fabrication, |
| | Electronics Industry Publishing House |
| | • USA. S. M. Sze, Semiconductor physics |
| | and devices, Science Press |

| University of Shanghai for Science and Tech | nology |
|---|---|
| | photoelectron emitting and display |
| | technology. |
| | -Students will understand the main |
| | fabrication methods and process of the |
| | most popular display device. |
| | -It aims to guide students to know the |
| | recent development of the display |
| | technology after learning this course. |
| Content | General Introduction; |
| | Liquid crystal display; |
| | Plasma display panel; |
| | Projector display; |
| | Stereoscopic display; |
| | Light emitting diode; |
| | Organic light-emitting diode; |
| | Electro luminescence device; |
| | Field emission display; |
| | Conclusion. |
| Study and examination requirements and | The photoelectron emitting and display: |
| forms of examination | students should submit an individual |
| | technical report about the development of |
| | the modern display technology after this |
| | course. |
| Media employed | electronic scripts, ppt projection, |
| Reading list | • Yu Shengjun, Jiang Quan, Zhang Lei, |
| | Display Device and Technology, |
| | National defense industry press, |
| | 2010.7 |
| | • Li Wenfeng, Gu Jie, Zhao Yahui, Lv |
| | Yingli, Optical Electronic Display |
| | Technology, Tsinghua University Press, |
| | 2010.2 |
| | • Wang Xiufeng, Cheng Bing, Material |
| | and Technology of Modern Display, |
| | |

| Lecturer | Lecturer JIANG Minshan Lecturer NIYi |
| | |
| Language Relation to curriculum | English /Chinese Elective |
| | |
| Type of teaching, contact hours | Lecture, seminar /2 hours per week of the |
| Montriand | module |
| Workload | Tuition time: 1 hours per week |
| | Self-study: 1 hours per week |
| Credit points | 2 |
| Requirements according to the | Homework ,Performance and intermediate |
| examination regulations | examination 30%;Final examination 70%. |
| Recommended prerequisites | Basic knowledge of Optical Engineering |
| Module objectives/intended learning | Course goals |
| outcomes | With an emphasis on an biomedical optics |
| | module, students will gain an Professional |
| | and improved knowledge of the principle, |
| | development and applications of |
| | biomedical optics. |
| | • Learning objectives and skills |
| | On successful learning of this course |
| | module, the student should be able to |
| | understand the principles of common |
| | imaging methods used for biomedical |
| | optics, explain the working principles and |
| | process of the biomedical optical devices, |
| | expanding student's thinking in an |
| | advanced optics field. |
| | It aims the students to own the basic |
| | characteristic and skills of biomedical optics |
| | after learning the advanced optics module. |
| Content | Introduction. |
| | |
| | Radiative transfer equation and diffusion theory. |

| University of Shanghai for Science and Technology | |
|---|---|
| | Sensing of optical properties and |
| | spectroscopy. |
| | Ballistic imaging and microscopy. |
| | Optical coherence tomography. |
| | Mueller optical coherence tomography. |
| | Diffuse optical tomography. |
| | Photoacoustic tomography. |
| | Ultrasound-modulated optical tomography. |
| Study and examination requirements and | Biomedical Optics: written examination |
| forms of examination | |
| Media employed | Beamer and board/whiteboard, electronic |
